N Portsmouth Ave Corridor Improvements

PROJECT DESCRIPTION

N Portsmouth Ave is a major North/South corridor connecting the mid-peninsula neighborhoods of University Park and Portsmouth. Public outreach and our own analysis show that traffic speeds on this corridor are very high and pose real safety concerns for people walking, biking, or accessing transit.

This project would add traffic calming and speed reader boards to reduce speeds on the corridor. It would also improve existing crossings and add new safer pedestrian crossings to help people get across the street. Upon implementation, PBOT would work with our partners at TriMet to improve access to bus stops and improve bus stop amenities at higher ridership stops. Additionally, this project would explore ways to improve the safety and comfort of people riding bikes through a range of design options.

PROJECT ELEMENTS

BETTER BIKE ROUTES

BETTER CROSSINGS

SAFER SPEEDS

TRANSIT IMPROVEMENTS

ESTIMATED PROJECT COSTS:
