## CC.5 N Alberta St Critical Connection

## **PROJECT DESCRIPTION**

This project closes a critical cap in the biking network by providing a safer connection for people biking over I-5 on N Alberta St. This busy section of N Alberta St is where many people access I-5 and is an awkward, difficult connection for people walking and biking today due to the multi-lane 4-way stop near the on/off ramps.

This project would explore a range of design options to reconfigure the roadway on N Alberta St to provide a comfortable bike lane connection between N Interstate Ave and the N Michigan Ave Neighborhood Greenway. Final design and implementation of this project requires approval by the Oregon Department of Transportation due to the proximity to the freeway ramps.

N Alberta St & N Michigan Ave
